SERVICE IMPLEMENTATION & SUPPORT 20
PARTICIPANT CONTRIBUTION BY CATEGORY 21

SERVICES

ACO Partnering

Service Description & Features

Accountable Care Organization (ACO) Partnering provides the ability for ACOs to receive notifications and view clinical data. The service benefits ACOs by providing CCDAs to support analytics platforms, sending notifications of patient admissions and Emergency Room visits to ACO Case Managers, and giving Case Managers access to the clinical portal to review documentation across the ACO.

Users of this service will receive a KeyHIE Clinical Portal account to view patient clinical data from other participating facilities.

CCDA Data Quality Improvement

Service Description & Features

KeyHIE partners with its member organizations to improve CCDA data quality through scoring techniques performed on their respective CCDA data. This cooperative effort allows providers to see the quality of their electronic health record (EHR) generated CCDAs and to pinpoints areas where key data element improvements can be made. KeyHIE benchmarking tools allow KeyHIE participants to proactively test their CCDAs and assist the KeyHIE implementation team with validation testing in the KeyHIE portal.

The results can be used for clinical quality reporting and to help drive quality initiatives. Improving the CCDA grades across our healthcare community will allow more clear and consistent clinical data sharing and CCDA document interoperability.

Clinical Portal

Service Description & Features

The Clinical Portal provides an entry point to view patient-specific information including Demographics, Encounters, Allergies, Medications, Laboratory, Radiology, Problems and Procedures and Transcribed Documents via the web. The portal manages and maintains the authentication and authorization, privacy and security, and auditing of user actions. The Clinical Portal includes Clinical Document Viewer and Summary Viewer.

The Clinical Document Viewer enables the ability to view clinical summaries and documents via a laptop, desktop, or mobile web browser. Its features include viewing and accessing clinical laboratory test results, summary of care records, and specialist consultation documents.

The Summary Viewer provides a high-level summary of clinical documents specific to each patient. For example, it provides a summary of clinical laboratory test results, summary of care records, and specialist consultation documents.

The Medication Viewer offers providers a longitudinal view of a patient's medication history, allowing the entire care team to easily reconcile a patient's medications.

DIRECT Secure Messaging

Service Description & Features

KeyHIE DIRECT Secure Messaging brings healthcare professionals closer together with a secure encrypted email service that makes it easier to send and receive messages and attachments with protected health information (PHI).

- Integrated with the Keystone Health Information Exchange, providing access to KeyHIE participant directory
- KeyHIE is one of PA's certified health information service providers (HISPs)
- Enables providers to meet Meaningful Use Stage 2 – transitions of care and patient engagement measures
- Real-time provider notifications for transitions of care and ACO requirements
- Lab results and hospital reports delivered to your mailbox
- Support for webmail or integration with many Electronic Health Record (EHR) systems
- Deliver patient referrals to a specialist to coordinate patient care plans
- Provides ability to audit your own secure message delivery
- Delegate access for support staff to manage mailbox on behalf of provider
- Competitive pricing and bulk rates available

It is available via a laptop, desktop, or mobile web browser.

To use this service, users must have a KeyHIE Provider Portal account and a KeyHIE DIRECT Secure Messaging account.

eHealth Exchange Gateway (The Sequoia Project)

Service Description & Features

The eHealth Exchange is the nationwide health information exchange that includes all 50 states, four federal agencies (DoD, VA, CMS, SSA), hospitals, medical groups, dialysis centers, and pharmacies, supporting more than 100 million patients. KeyHIE is now connected with the Department of Veteran's Affairs (VA), Johns Hopkins, Lehigh Valley, OCHIN, and MedVirginia as well. The eHealth Exchange can be accessed within the KeyHIE Provider Portal.

The eHealth Exchange Gateway creates a secure, standards-based, auditable, and bi-directional connection between KeyHIE and the eHealth Exchange, enabling users to share and query complete patient information with other HIEs/HIOs and federal agencies. KeyHIE also plans to be connected to Carequality networks through the eHealth Exchange, including CommonWell and many more.

Users of this service will receive a KeyHIE Portal Account to view patient clinical data from other participating entities.

FHIR API Connectivity

Service Description & Features

KeyHIE enables our participants to connect via a variety of Application Programming Interfaces (APIs) based on the Fast Healthcare Interoperability Resources (FHIR) framework. This standard created by Health Level Seven International (HL7) utilizes secure web-centric technologies to allow connections from a wide range of devices and applications.

KeyHIE offers a variety of FHIR R4 APIs for that our participants may utilize to connect to KeyHIE data including:

- Allergy
- Condition
- Document Reference
- Flag
- Medication Administration
- Medication Request
- Observation
- Practitioner
- Appointment
- Diagnostic Report
- Encounter
- Immunization
- Medication Dispense
- Medication Statement
- Patient
- Procedures

HEDIS Support

Service Description & Features

Thanks to the wealth of data contributed by our Participants, KeyHIE is able to leverage that connection to provide a means by which Participants can deliver data for HEDIS purposes to partnering payors.

In addition to the dashboard data KeyHIE provides through KeyHIE Insights, we are also able to deliver data for HEDIS purposes on behalf of our Participants through our Information Delivery Service. This can be provided as either discrete data or a flat file format. It is also possible to import these results into a HEDIS reporting database for purposes of improving care coordination and quality.

Immunization Delivery

Service Description & Features

KeyHIE leverages our connection to the Pennsylvania Statewide Immunization Information System (PA-SIIS) to assist with public health emergencies such as Coronavirus Disease 2019 (COVID-19). For organizations who are required to submit COVID-19 vaccination reporting, KeyHIE can help. Participants can connect to and send HL7 Unsolicited Vaccination Update (VXU) messages to KeyHIE, which are then transmitted through our connection to PA-SIIS. For participants who are unable to create an HL7 interface, KeyHIE is able to receive and ingest a Comma Separated Value (CSV) flat file containing vaccination information that is then transformed into HL7 VXU format for reporting purposes and sent to PA-SIIS. Both options allow organizations to participate with vaccination efforts and fulfill state requirements.

KeyHIE Bridges

Service Description & Features

KeyHIE Bridges provides the ability to connect internal systems within hospitals. By utilizing this service, hospitals can integrate their internal systems while sharing data with the community. This service complements KeyHIE's vision to achieve maximum interoperability while keeping costs low. KeyHIE Bridges can facilitate data sharing across disparate systems based on business rules.

KeyHIE Bridges supports the following use cases:

- Normalizing patient demographics across multiple feeds
- Data sharing based on business use cases
- Facilitating data sharing among the healthcare community

KeyHIE Insights

Service Description & Features

KeyHIE Insights is an innovative solution from KeyHIE that leverages our Business Intelligence platform to create actionable provider-level data to our participants. Through interactive dashboards, Participants can access the data necessary to improve care coordination through treatment programs and meet quality standards. We currently support HEDIS, STARS, MIPS, and other custom-developed measures for quality programs. Future development will include support for claims-based utilization and network management metrics.

KeyHIE Notifications & Information Delivery Service (IDS)

Service Description & Features

The KeyHIE Information Delivery Service (IDS) enables healthcare providers to subscribe and receive real-time alerts, notifications, and important documents for their patients based on individual preferences. These updates can be delivered via text (SMS), email, DIRECT, or into your electronic health record (EHR) if capable.

This method of secured information delivery allows providers to access real-time patient information to efficiently coordinate care and monitor their patients.

IDS keeps providers informed:

IDS facilitates a patient's transition of care by allowing providers to stay well-informed about their patient's health status using the following available subscription types:

- Inpatient admission notifications
- Emergency admission notifications
- Lab results delivery
- Discharge summaries
- Inpatient discharge notifications
- Emergency discharge notifications
- Radiology reports
- Consultation notes

- ED summaries
- CCDA

IDS is designed to be highly configurable, allowing new subscription types to be implemented quickly and easily.

IDS subscription types available:

Subscriptions may be created based on the following:

1. **Patient-Provider**: Based on the patient-to-provider relationship, providers may subscribe to receive important updates on their patients. These relationships include primary care physician, referring physician, and many more.

2. **System-System:** Based on the relationship between healthcare facilities, KeyHIE can deliver important patient information from one healthcare organization to another.

In addition, IDS now supports querying the Pennsylvania Patient and Provider Network (P3N) for notification delivery for patients who had their data sent from one of the other P3N HIEs.

To use this service, users must have access to their EHR, their KeyHIE Provider Portal account, or a KeyHIE DIRECT Secure Messaging account. A list of clinical data types submitted to KeyHIE by participants is provided at the end of this document.

KeyHIE Transform

Service Description & Features

KeyHIE Transform provides an interoperability mechanism whereby Long Term & Post-Acute Care (LTPAC), Home-Health, Emergency Medical Services (EMS), Hospice, and CCD Exchange Services without an EHR are able to participate in an HIE. KeyHIE Transform extracts key patient information from the MDS (Minimum Data Set) or OASIS (Outcome and Assessment Information Set) and converts it into a standardized CCDA (Continuity of Care Document or clinical care summary). It extracts clinically relevant National Emergency Medical Services Information System (NEMSIS) data from the Patient Care Report (PCR) and converts it into a standardized HL-7 CDA R2 document or clinical summary, allowing electronic delivery of EMS-provided patient care information directly to the patient's care team. KeyHIE Transform also converts Hospice Item Sets into encounter data for delivery into the HIE.

KeyHIE Transform meets and exceeds HIPAA and protected health information security standards. In addition, it is based on HL7, which means the technology is nationally standardized and interoperable.

Benefits:

- Helps meet Meaningful Use Stage 2 requirements for reimbursement.
- Minimal computer skills needed to operate; minimizes staff time spent on phone calls, faxing, and waiting for paperwork.
- Meets national (HL7) standards for interoperability.

Users of this service receive a KeyHIE Portal Account to view patient clinical data from other participating clinical facilities. Please visit https://transform.keyhie.org/ for more information.

Life Image Integration

Service Description & Features

KeyHIE features integration with Life Image through SMART on FHIR, which is the first program of its kind in the United States. This integration allows providers to view DICOM images directly in the KeyHIE Clinical Portal without leaving the site. This seamless integration improves patient care workflows and gives the patient's care team the means to avoid duplicate testing, which can potentially lower the patient's overall radiation exposure. In addition, KeyHIE facilitates Geisinger's Mammosphere software offering that allows women the ability to take their mammography images with them regardless of the provider they see.

New Jersey Health Information Network (NJHIN)

Service Description & Features

New Jersey Health Information Network, operated by the New Jersey Innovation Institute, connects covered entities in New Jersey to exchange clinical data and promote interoperability. KeyHIE's connection to NJHIN allows Clinical Portal users the ability to perform queries and retrieve the requested information for patients under their care.

Users of this service will receive a KeyHIE Portal Account to view patient clinical data from other connected clinical facilities.

NJSHINE

Service Description & Features

KeyHIE's connection to NJSHINE allows Clinical Portal users the ability to query for and retrieve relevant patient data from organizations connected through NJSHINE.

Users of this service will receive a KeyHIE Portal Account to view patient clinical data.

Payor Partnering

Service Description & Features

Payor Partnering provides the ability for Payors to receive notifications and view clinical data. The service benefits Payors by providing notifications of patient admissions and Emergency Room visits to Case Managers and provides Case Managers access to the clinical portal to review documentation across the ACO.

Users of this service will receive a KeyHIE Portal Account to view patient clinical data from other participating clinical facilities.

Pennsylvania (PA) Department of Health (DOH) & Department of Human Services (DHS) Reporting

Service Description & Features

KeyHIE provides a way for healthcare professionals to send information to PA DOH and DHS via the PA Public Health Gateway (PHG). PHG is a single connection that streamlines provider reporting into the following Commonwealth public health registries:

- Electronic Lab Reporting (ELR)
- Pennsylvania Cancer Registry (PCR)
- Pennsylvania Statewide Immunization Information System (PA-SIIS)
- Electronic Clinical Quality Measurement (eCQM)
- Prescription Drug Monitoring Program (PDMP)

To access PHG services, provider organizations must connect to KeyHIE and be approved by the Commonwealth to onboard to the PHG and to the desired public health registry connection.

Role-Based Notifications/Reminders

Service Description & Features

Features of this service include notifying patients, physicians, and other healthcare professionals with real-time clinically relevant information, including notifications for hospital admissions and emergency room visits and reminders for preventative/follow-up care. To use this service, users must have access to their EHR.

Summary Viewer

Service Description & Features

Summary Viewer provides a high-level summary of clinical documents specific to each patient. For example, it provides a summary of clinical laboratory test results, summary of care records, and specialist consult documents. Access is available via a laptop, desktop, or mobile web browser.

Vaccination Notifications

Service Description & Features

KeyHIE offers vaccination notifications that can be sent to Participants for their patients who received their COVID-19 vaccines from other facilities participating in KeyHIE. These notifications may be sent to care team members and can be sent either as a secure message or a batched CSV file.

SERVICE IMPLEMENTATION & SUPPORT

Additional information to include pricing and next steps to obtain listed services may be obtained by emailing KeyHIESupport@KeyHIE.org or by calling 570-214-9438.

Support is available 24/7. Help with resolving problems and issues with services can be obtained via email during regular business hours at KeyHIESupport@KeyHIE.org or after hours at 570-271-8092.
